Art Unit: 1653

This Office Action is in response to the paper filed April 26, 2006. Claim 1 has been canceled. Claims 2-21 are currently pending and are under examination.

Priority is to October 30, 2002.

**Withdrawal of Objections and Rejections:**

The rejection of Claims 1 and 21 under 35 USC 103 is withdrawn.

**New Objections and Rejections:**

The disclosure is objected to because of the following informalities:

The Abstract must be provided on a single sheet of paper. The abstract in the IFW is the front page of the WO document.

The priority information must be updated on page 1 of the specification to include the parent PCT.

The figure legends in the Brief Description of the Drawings must match the figures. For example, there is no Figure 1 but Figure 1A and 1B. Also, please note that at page 4, line 14, reference should be made to Figures 5A to 11B.

Appropriate correction is required.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6-9, 10-17, 19, and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 6 and 7 depend from canceled Claim 1, rendering these claims indefinite.

Art Unit: 1653

In Claim 9, "lipopeptide" should be replaced with — caspofungin — to clarify that the pneumocandin is further limiting the product precursor of caspofungin.

Claim 11 does not further limit Claim 9. First, Claim 9 does not provide the basis for the modifier, and the modifier of Claim 2 is the same as in Claim 11, that is, an amino acid or an amino acid ester.

Claim 14 should depend from Claim 12.

Claim 15 has no antecedent basis in Claim 14. It appears that Claim 15 should depend from Claim 2.

Claim 16 should depend from Claim 14.

Claim 19 does not further limit Claim 17. First, Claim 17 does not provide the basis for the modifier, and the modifier of Claim 2 is the same as in Claim 19, that is, an amino acid or an amino acid ester.

Claim 20 should depend from Claim 2 because Claim 19 does not provide basis for the stationary phase of Claim 20.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1653

Claims 2-21 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 3-14 of copending Application No. 10/569,155. Although the conflicting claims are not identical, they are not patentably distinct from each other because normal phase chromatography of the instant invention encompasses liquid phase chromatography of '155 and '155 uses "comprising" language which does not exclude the use of amino acid modifiers in the mobile phase.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
